Personal Profile

A passionate and adaptable Junior Software Developer with a strong foundation in full-stack web development. Proficient in front-end and back-end technologies with hands-on experience building applications that improve efficiency and user experience. Proven ability to work on diverse projects, deliver high-quality code, and solve complex problems. Eager to leverage my skills in a dynamic team and contribute to innovative solutions.

Key Skills

- **Front-end Development:**
 - HTML, CSS, JavaScript, React – Built responsive and user-friendly interfaces, improving website performance and accessibility.
 - Experience in implementing CSS frameworks (Bootstrap, Flexbox) to streamline UI design.
- **Back-end Development:**
 - Python, C#, C++, MySQL, Node.js, .NET – Developed and maintained back-end logic for web applications, ensuring smooth data management and system integration.
 - Experience with RESTful APIs and database management (MySQL), optimising data flow between front-end and back-end systems.
- **Version Control & Tools:**
 - Proficient in Git and GitHub for version control, collaborating on projects with teams to track code changes and resolve issues efficiently.
 - Hands-on experience in IDEs like VS Code and working in a Linux environment.
- **Problem-solving & Collaboration:**
 - Adept at debugging code and finding solutions to technical challenges in real-time, improving application stability.
 - Worked effectively in teams using Agile methodologies, contributing to sprints and delivering high-quality features on schedule.

Professional Experience

Operations Manager – Decathlon, High Street Kensington

April 2022 – January 2024

- Managed the development of internal tools that streamlined workflow processes, reducing system downtime by 15%.
- Led a cross-functional team to deliver improvements to in-store applications, enhancing performance and user experience.
- Contributed to the company's digital transformation by deploying custom software solutions, reducing manual data entry by 20%.

- Increased overall sales by 20% through optimizing operational efficiency and customer engagement strategies.
- Enhanced customer satisfaction, raising Google reviews from 2.5 to 4 stars and driving increased positive feedback across key platforms.
- Achieved a 30% reduction in store costs by refining inventory management and operational spending controls.

Department Manager – Decathlon, High Street Kensington

April 2021 – April 2022

- Optimised technical workflows by developing Python scripts to automate routine tasks, saving the team several hours weekly.
- Worked with IT and development teams to troubleshoot and resolve software issues affecting store operations.

Bar Manager – Crowne Plaza, London

August 2020 – April 2021

- Developed a custom POS solution to improve transaction tracking, reducing errors and improving overall accuracy by 10%.
- Coordinated with third-party developers to integrate payment systems with back-end reporting tools.

Education & IT Training

Foundational C# with Microsoft (June - August 2024)

- Developed expertise in C# and .NET, building backend systems to handle complex data processing tasks and integrating APIs for enhanced functionality.

Just IT Training Ltd, Digital Skills Bootcamp (March - May 2024)

- Gained comprehensive knowledge of web development (HTML, CSS, JavaScript, Python, MySQL). Worked on full-stack projects simulating real-world development environments and client requirements.

The Odin Project – Foundations Course (January - March 2024)

- Completed full-stack development projects, focusing on front-end and back-end technologies, including Git version control and Linux systems.

Projects

- **Snake Game** – Designed and built a browser-based game using HTML, CSS, and JavaScript, enhancing user interface design and logic implementation.
- **Hangman Game** – Created a Python-based game with a Tkinter GUI, showcasing knowledge of event-driven programming.
- **Fitness Progress Tracker** – Developed a full-stack React app to track user fitness metrics, leveraging MySQL for database management and optimising data presentation on the front-end.
