Career Objective

Software developer by training and a **Configuration Specialist at Amazon** for the past two years, where the role has grown into a **cloud engineering** one. Designs, deploys and owns **serverless services on AWS** — Lambda, S3, EventBridge, EC2, IAM and CloudFormation — alongside the automation and internal tooling used daily by the **EU Central Operations** planning team across **19 Amazon marketplaces**. Comfortable taking a problem **end to end**: scoping it with the people who own it, designing a solution on AWS, writing the **architecture and threat model**, delivering it to production, then documenting it so the rest of the team can reuse it. Seeking to apply this expertise as a **Solutions Architect**, doing the same work with customers full time.

Technical Skills

- **AWS:** Lambda (Node.js 20 ESM, Python), S3, EC2, EventBridge scheduling, IAM & STS (cross-account roles, assume-role chains, least-privilege policies), CloudFormation, SAM, Lambda Layers, CloudWatch Logs, CloudShell, SigV4 request signing, API Gateway (as a client). Working knowledge of CDK and Secrets Manager / SSM Parameter Store.
- **Programming:** JavaScript (ES modules, Node.js), Python 3, PowerShell, C#, HTML/CSS.
- **Libraries & platforms:** Playwright, Shapely, pandas, ExcelJS, JSZip, Chrome Extensions (Manifest V3), Mapbox GL, Kivy, PyInstaller, Git.
- **Integrations:** Slack Web API (chat.postMessage, chat.scheduleMessage, conversations, bot tokens, incoming webhooks), REST/JSON APIs, AWS SigV4, Cognito bearer tokens, OpenStreetMap Nominatim.
- **Architecture & practice:** serverless design, **infrastructure as code**, least-privilege IAM, **threat modelling (STRIDE)** and security review, idempotency and compensating actions, structured logging, computational geometry, technical documentation and runbooks.
- **AI:** AI-assisted development with agentic coding tools and **MCP server integration** (AWS Documentation, Slack); currently building toward **Amazon Bedrock** and GenAI workloads.

Professional Experience

Configuration Specialist – Amazon

London, United Kingdom | 10/2024 – Present

*EU Central Operations (COSM / OTR). Core remit covers last-mile **delivery-area and jurisdiction configuration** for Amazon delivery stations. Alongside it, designs, builds and owns the **AWS services, automation and internal tooling** the team relies on day to day.*

- Designed, deployed and own **serverless services on AWS**: Lambda (Node.js 20 ESM and Python), S3, EventBridge schedules, Lambda layers and CloudWatch logging — replacing manual daily queue checks and reporting with **scheduled, auditable pipelines**.
- Authored **infrastructure as code** in CloudFormation and SAM, including cross-account IAM roles gated by `sts:ExternalId` conditions with single-action, single-resource policies — **least privilege and confused-deputy mitigation** — parameterised for reuse and exported for cross-stack composition.
- Implemented **AWS SigV4 request signing** against internal Amazon APIs using only Lambda execution-role credentials (**no static access keys**), with cursor pagination, runaway page caps and query-level data minimisation.
- Wrote the **system architecture document and threat model** for a production service — trust boundaries, data-flow diagram, data classification, **six STRIDE-mapped threats** with mitigations and residual risk — and drove it through Amazon's **application security review** to closure, including a self-identified secrets handling gap and its remediation plan.
- Provisioned and deployed a **Python Slack bot on EC2** that serves internal API queries to the team, and built the Slack integration layer around it: **scheduled DM reminders**, alias-to-user resolution across 17 Amazon email domains, incoming webhooks and bot-token flows, plus operator tooling to list and cancel

scheduled messages.

- Replaced a hardcoded routing map with an **S3-backed configuration pipeline** so business owners update a spreadsheet instead of requesting a code change: scheduled ingestion to S3, in-Lambda Excel parsing, **warm-container TTL caching** with a forced-refresh override, and a **two-hop assume-role Lambda chain** with idempotency flags and compensating reset logic.
- Built and maintain **SmartJAS**, a Manifest V3 Chrome extension used by the EU planning team **across 19 marketplaces**, plus a suite of userscripts distributed with a **self-hosted version-control client** (forced updates, version gating, changelog) and written install guides — tooling adopted and relied on beyond my own team.
- Automated recurring planning work in **Python with Playwright and Shapely**, removing **several hours of manual effort per person per day**, and built an automated **quality-control service** that scores completed work against configurable thresholds, promotes only what passes and routes anything flagged to human review.

Invent and Simplify & Learn and Be Curious – taught myself AWS, serverless design and security review on the job, then put them into production for the team.

Freelance IT Support Specialist – Self Employed

London, United Kingdom | 01/2024 – 10/2024

- **Optimized system configurations** and resolved network issues, improving operational efficiency by **25%** and uptime by **15%**.
- Conducted **auditing and compliance checks** to align IT operations with industry standards, and automated recurring diagnostics in Python.

Digital Operations Manager – Decathlon

London, United Kingdom | 02/2022 – 01/2024

*Decathlon's busiest UK store, located in **High Street Kensington**, serving over **2000 customers** on our busiest day.*

- Managed **stakeholder relationships** and **cross-functional collaboration** across logistics, IT and finance, and built replenishment and auditing tools that reduced discrepancies by **18% YoY**.
- Managed a **£3.96M yearly turnover**, achieving **15% YoY sales growth** by optimizing retail and logistics operations.
- Directed a **25+ member cross-functional team**, improving employee retention by **14.4% YoY**.
- Spearheaded process improvement across logistics operations, saving **720 hours (£8.5k)** of labour cost YoY, and achieved **99% safety audit compliance** – top-ranked store in the UK in 2023.

Deliver Results & Customer Obsession – improved customer feedback scores by almost **60%** (Google reviews from 2.6 to 4.1 stars within a year).

Department Manager – Decathlon

London, United Kingdom | 11/2020 – 02/2022

- Led a high-performing sales and logistics team across multiple departments, enhancing productivity by **18%**.
- Introduced **data-driven decision-making** and advanced analytics, improving stock management and forecasting accuracy by **15%**.
- Streamlined **network design and warehouse automation**, cutting manual handling time by **25%** and saving **£80.8k** in labour costs YoY.
- Developed compliance auditing strategies, achieving **85% SOP audit compliance** in 2021, and expanded team training to improve retention by **11%**.

Think Big & Earn Trust – established strong relationships with senior leadership to drive operational excellence.

Bar Manager – Crowne Plaza

London, United Kingdom | 03/2019 – 02/2020

- Managed financial forecasting, supplier relationships and **compliance auditing**, improving efficiency by **10%**.

Earlier Roles – Greece

Kos & Patras, Greece | 01/2012 – 11/2018

- **Head Bartender and Barista** – Lakitira Resort & Village and Cafe Bar “Le Grand” (04/2017 – 11/2018). Trained and mentored staff and optimized workflow processes across seasonal contracts.
- **Fitness Instructor** – Gym Factor (02/2013 – 03/2017). Designed personalized programmes and applied data analysis to track client progress.
- **Computer Technician Intern** – Wizards Solutions (01/2012 – 01/2013). Diagnosed hardware and software issues and carried out **network design and configuration** updates.

Education & Certifications

Electronic Computing Systems & Networks T-Levels Equivalent | Technical High School, Messologi, Greece (2005 – 2008)

Digital Skills Bootcamp Certification | Just IT Training Ltd, London (03/2024 – 05/2024)

Foundational C# with Microsoft Certification | (06/2024 – 08/2024)

Projects & Achievements

Daily Pending-Approval Report (AWS Lambda, EventBridge, IAM, Slack) – scheduled, read-only service that queries an internal ticketing folder, maps each open item to its station owner and posts one batched Slack notification ordered by time waiting, covering roughly **70 stations and 19 owners**. Configuration fully externalised to environment variables with fail-fast validation at container init, **no persistence by design**, and partial failures reported rather than thrown. Shipped with its own architecture document and threat model.

SmartJAS – Chrome Extension, Manifest V3 (~500 KB JavaScript, 19 marketplaces) – feature layer over Amazon’s internal area-planning tool. Bridges Chrome’s isolated world into the page’s own JavaScript to reach a React-held **Mapbox GL** map, rewrites Mapbox paint expressions to colour polygons by name, and runs **boolean polygon clipping** to diff previous against proposed delivery areas. Proxies internal planning, routing and reporting APIs through the service worker, with token lifecycle handling and caching.

Automated Quality Control (Python, Playwright, Shapely) – reviews completed planning work rather than performing it: ports the extension’s polygon geometry to headless Python, diffs successive plan stages, scores coverage against configurable thresholds and **promotes only passing cases**. Read-only against the planning system apart from a single audited write; flagged cases go to a review step for a human decision.

Weekly Task Scheduler (Python, Slack SDK, Excel COM) – automates a team rota from a shared availability tracker using a **52-week history-weighted fairness algorithm** with per-task weekly caps and daily spread rules, then publishes the schedule and schedules per-person reminder DMs, behind a preview-and-confirm gate.

Languages & Interests

Languages: English (C1), Greek (Native)

Interests: Software development and automation, weightlifting, music (guitar)
